

The Ramada Hotel in Muscat is the first in the Middle East to utilise the iRoom iDock and Apple iPad 16 Gb. The iRoom iDock is the world's first motorised docking system that actually mounts an iPad in the wall rather than on the wall. A proximity sensor automatically opens the dock when someone is nearby so it is ready for iPad insertion or removal. The door automatically closes after 10 seconds and the proximity sensor can be disabled if required for security measures.

When the iPad is securely inside the iDock will charge its battery, while integrated composite audio inputs allow it to be hooked up to a sound system and the iPad used as an audio source. In the event of a power failure, the iDock will automatically open so the iPad isn't trapped inside.
